

Omnitone

COLOUR-MATCHED BATH & SHOWER WASTES

Cleaning & Care

Your Omnitone finish is built to shrug off everyday bathroom life — independently tested to BS 3900 and ISO 11341. A little routine care keeps the colour flawless for years.

Day to day

- ✓ **Dry after each use** with a soft cloth. Water left to dry can lead to limescale that's harder to remove later.
- ✓ **Clean with warm water and a neutral-pH detergent**, then buff dry with a clean, soft, lint-free cloth.
- ✓ **Rinse off product residue** — toothpaste, shower gel and hair treatments — to keep the surface blemish-free.

Best avoided

- ✗ **Harsh chemicals** — no bleach, ammonia, alcohol or acetone, or anything acidic, caustic or abrasive.
- ✗ **Abrasive tools** — no scouring pads, abrasive sponges or steel wool; they can permanently mark the surface.
- ✗ **Dyed or wet cloths left in contact** — colours and patterns can transfer, so don't drape cloths over the waste.
- ✗ **Cleaning residue in cloths** — rinse every cloth thoroughly before it touches the surface.

QUICK GUIDE ✓ Warm water · Mild detergent · Microfibre cloth
✗ Acids or alcohol · Abrasive sponges

The finish carries a **3-year residential guarantee** (1 year in commercial use), and the waste and trap beneath it remain covered exactly as standard. If you're ever unsure how to treat a mark, call us before reaching for anything stronger — we'll talk it through.
